

SPRING

is just around the corner.....

Time to consider safety for both your family and PETS... We have two safety water devices available. The one is an anti-drowning device and the manufacturers also have a gate alarm system available, so if a child, the gardener, a guest leaves the gate open an alarm will sound.

The other device is an anti-drowning device and a lost device all in one. Ideal for days at the beach or the river. Those long walks in the park-to ensure your treasured pet does not go unnoticed, should it run off in another direction.

The above items may be a bit pricey but can you put a price on a LIFE?????

Spring also awakens the fleas and ticks which should have been inactive during the cold months - time to get out your treatments for the these pesky little pests. We use FRONTLINE ask your trusted vet for advice on what you can use. Biliary is a killer - take precautionary measures.

Has your treasured POOCH visited the vet recently, for a thorough check up??? If not possibly a good time to make that visit. Your dogs teeth are of prime concern, as bad tooth decay can and often does lead to other health issues. Is your

pet sterilised? If not another good reason to make that call to your trusted vet. Deworming is essential to keep your dog in optimal health - if your dog has not been dewormed in the last year, visit your vet. Is your dog inoculated? IF not see your vet.....

If we take all the necessary steps to avoid any unnecessary problems with our pets we can look forward to a wonderful Spring and Summer ahead.
